

Safer injecting

Avoid injecting site bacterial infections by washing hands and site before you inject

Only use new sterile equipment: make sure you always collect enough

Rotate injecting sites to give your veins a rest

If an injecting site becomes red or sore, don't inject there – show the infection to your pharmacist, needle exchange or GP

Citric and vitC damage veins: use as little as possible

Injecting drugs increases risk of overdose as well as HIV, and hepatitis: smoking drugs reduces the risks

For advice about options available to you please contact Horizon on 01253 311431 or if you are under 25 contact BYPS 01253 754840
